Planning for Data Center Physical Layout and Support Center Space

Planning for the physical layout and design of the data center building space should include more than just the equipment room. For example, areas for loading equipment, storage and support personnel should be included in building space allocations to ensure that all space requirements of the data center are included in a high-level budget.

Read this research note from [Info~Tech Research Group](#) to consider all data center functions and space requirements before drawing up final architecture plans and determining a budget for the data center building space.
